Forensic Computing

Open Day

Monday 29th June 2015

Cranfield UNIVERSITY

Forensic Computing involves the examination of digital devices in order to recover evidence of criminal activity. To find out more about the MSc in Forensic Computing, come along to our Open Day on the 29th June 2015.

You will visit the Centre for Forensic Computing, which is based at our Shrivenham campus in Oxfordshire (situated at the Defence Academy of the UK). The Centre is engaged in Education, Research and Casework in digital forensics.

- Cranfield's MSc is one of the most respected in the UK, and the course content is focussed solely on digital forensic science.
- Many of the lecturers are active practitioners which allows realistic examples to be included in the teaching material.
- Staff at the Centre are also research active, ensuring that you are studying the most up-to-date developments in forensic computing.
- The module content is largely practical-based, including use of tools that are used in real digital forensic labs.
- You will study alongside part-time MSc students who are already working in the field.

The Open Day includes:

- An explanation of the course structure and the modules available
- Taster sessions, including performing an analysis of digital data
- A tour of the facilities at the Centre and the Shrivenham campus
- Meeting our course team

Pre-registration is essential for this event.
